

Customer Retention & Churn Analysis Report

Objective

This project focuses on analyzing customer churn behavior using Power BI to identify patterns, understand retention drivers, and provide actionable recommendations to reduce customer churn.

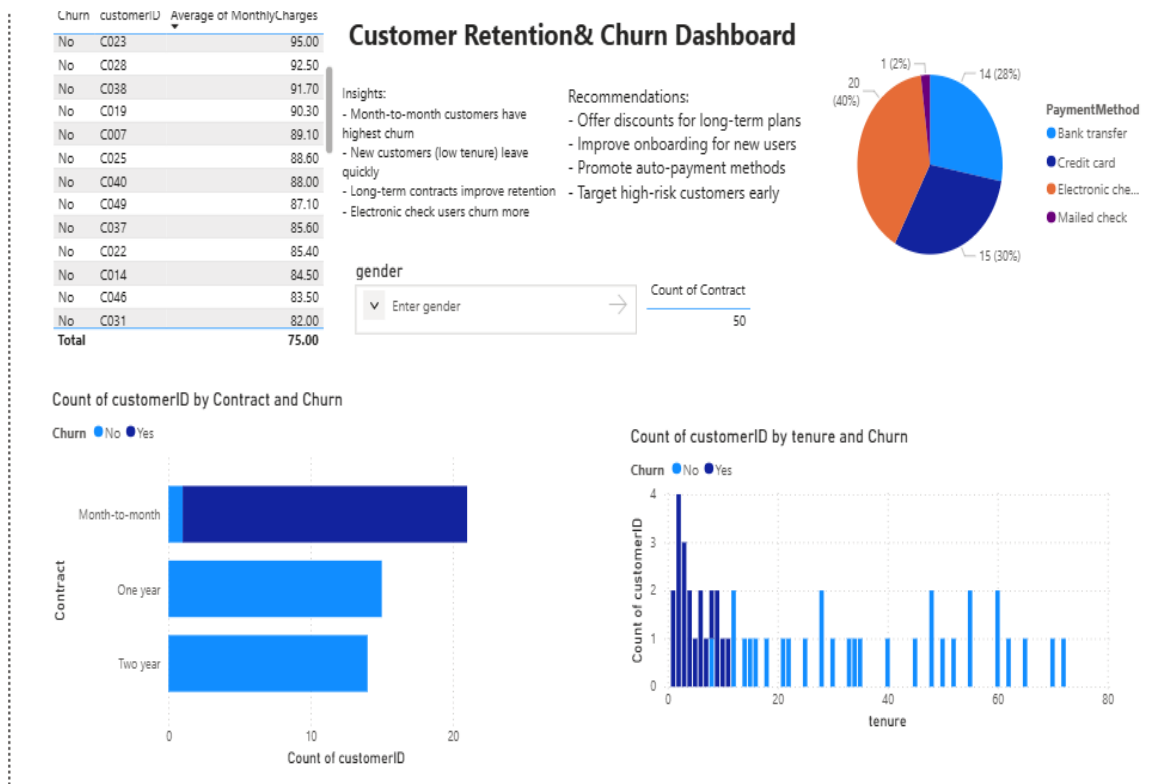

Tools Used

Microsoft Power BI, Excel (CSV dataset)

Dataset Description

The dataset contains customer information such as customerID, gender, tenure, contract type, payment method, monthly charges, and churn status (Yes/No).

Dashboard Overview

Analysis Performed

- Customer segmentation based on contract type and churn - Analysis of payment methods and their impact on churn - Tenure-based churn behavior - Overall customer count and distribution

Key Insights

- Month-to-month customers have the highest churn rate - Customers with low tenure are more likely to leave - Long-term contract customers show higher retention - Electronic check payment users have higher churn

Recommendations

- Offer discounts or incentives for long-term contracts - Improve onboarding experience for new customers - Encourage customers to switch to auto-payment methods - Identify and target high-risk customers early

Conclusion

This project demonstrates how data analytics can be used to understand customer behavior and reduce churn. By implementing the recommended strategies, businesses can improve retention and increase long-term revenue.
